

1989 Toyota MR2 Electric Vehicle conversion

Suhas Malghan

Blue tags are labels I haven't removed yet as the instrumentation box still needs to be installed

Here you can see how the motor is mounted low in the car but just a little higher than the lowest as defined by the transmission (not shown). The tunnel battery box can be seen just above the orange straps that need to be trimmed.

Control panel has drive selector, regen on/off and full power on/off

6 modules, the tan cylinder is the brake vacuum reservoir. The vac pump can be seen in the compartment where the radiators used to be
